PROFESSIONAL SUMMARY

Senior iOS engineer with 8 years of experience building consumer products from early-stage startups to global platforms. Currently architecting an offline-first, real-time collaboration app and an AI-powered “vibe-coding” experience that turns natural-language prompts into interactive widgets. Previously shipped products at Meta (Instagram, Threads) and Audible reaching 1B+ users and driving measurable growth, including +510K daily Threads posts, +320K daily onboarded users, and +0.25% Instagram revenue impact. Deep expertise in mobile architecture, real-time systems, performance, and end-to-end product development using Swift, SwiftUI, and UIKit.

KEY PRODUCT IMPACT

- IG Feed → Threads crossposting launch: +510K daily original posts, +11% total original posts, +185K weekly active users on Threads
 - Threads onboarding from IG Feed: +320K users onboarded per day and +50K new daily active users
 - Navigation pinning change promoting Threads from IG Feed: +2.12% DAU, +1.34% WAU, +1.74% post impressions
 - IG feed attribution redesign: +0.21% post impressions and +0.25% revenue increase
-

SKILLS

Languages: Swift, Objective-C, Python, C++, Rust, JavaScript, SQL

Backend & Infra: AWS (EC2, S3, IAM, VPC), Docker, Terraform, Kafka, ClickHouse, Redis

iOS: SwiftUI, UIKit, Combine, MVVM architecture, offline-first apps, real-time messaging

APIs & Protocols: REST, GraphQL, gRPC, WebSockets

EMPLOYMENT

Founding Engineer, 01/2026 - Current

Idle – New York, NY

- Built and shipped an AI-powered “vibe-coding” experience for iOS, enabling users to generate, iterate on, preview, and publish interactive widgets from natural-language prompts with real-time progress updates.
- Architected a production iOS collaboration app using Swift, SwiftUI, UIKit, MVVM, and reactive data flows, supporting public and private groups with breakout channels, DMs, and dynamic unread state.
- Engineered offline-first, real-time messaging with GRDB/SQLite and WebSockets, including optimistic updates, background synchronization, read-state reconciliation, and resilient network recovery.
- Improved startup responsiveness and large-timeline performance through cache-first loading, fetch-around pagination, deferred message hydration, and bootstrap optimization.

Senior Software Engineer, 04/2022 - 09/2025

Meta (Instagram/Threads) – New York, NY

- Drove +510K daily posts and +185K weekly active users on Threads by launching IG Feed → Threads crossposting.
- Increased onboarding by +320K users/day and +50K new daily active users through Threads onboarding experiments in IG Feed.
- Increased DAU by +2.12% and post impressions by +1.74% by launching navigation pinning promoting Threads.
- Increased revenue by 0.25% and post impressions by 0.21% through redesigned IG feed attribution system.
- Designed a protocol-based Swift attribution framework replacing legacy Objective-C code, improving modularity and increasing Instagram Feed scroll performance by 0.2%.

- Developed and launched Instagram Feed features serving hundreds of millions of users, shipping through large-scale A/B testing while maintaining strict mobile performance and reliability standards.
- Led cross-functional DSA compliance launch across product, relevance, and mobile engineering teams under regulatory deadline.
- Spearheaded effort increasing Instagram Explore surface end-to-end test coverage from 10% → 100%, reducing production severity incidents.

Software Development Engineer, 03/2020 - 03/2022

Audible – Newark, NJ

- Led migration of customer information APIs, reducing service calls by 50% and consolidating business logic into a single backend source of truth.
- Migrated multiple mobile screens to a server-driven UI architecture, improving product iteration speed and reducing client complexity.
- Served as release manager for mobile builds, coordinating CI/CD pipelines and App Store releases.
- Collaborated with data engineering teams to design standardized analytics instrumentation for Adobe reporting.

Mobile App Developer, 09/2018 - 03/2020

Globalstar – Covington, LA

- Led iOS development of a mobile application for configuring and updating firmware on satellite IoT modules via Bluetooth Low Energy.
- Developed companion messaging application for SpotX satellite communicator using React Native.
- Built CI/CD pipeline with Bitbucket, Bamboo, and Fastlane and automated hardware testing using Python scripts and BeagleBone devices.

PROJECTS

Quantitative Trading Research & Infrastructure

Designed and built an end-to-end research and execution platform for systematic equities trading.

- Built a Python research and backtesting engine integrating Databento market data and macroeconomic indicators into ClickHouse storage with walk-forward validation across 26 equities (2018–2026).
- Developed ML pipeline using Random Forest models to predict intraday breakout signals.
- Designed a production-grade options-flow research pipeline with deterministic validation, ClickHouse-backed storage, point-in-time feature generation, and fail-closed CI/PR workflows for scalable market microstructure and ML signal research.
- Expanded engine and pipelines implementing an agentic quant research platform enabling parallel AI strategy pods to produce standardized, validator-backed candidate packages with comparable metrics, tournament manifests, failure isolation, and controlled promotion into production research workflows.
- Implemented C++17 real-time trading engine integrating Interactive Brokers APIs with concurrent tick aggregation and automated risk management.

Cobile (iOS)

Built an AI-assisted development platform that allows autonomous agents to safely operate on GitHub repositories.

- Developed SwiftUI client supporting GitHub OAuth, real-time WebSocket event streaming, and offline session replay.
- Designed backend execution platform using Fastify and AWS (ECS, SQS, S3) to run isolated agent environments.
- Implemented secure patch workflow where AI-generated diffs are applied through controlled PR pipelines.

EDUCATION

Bachelor of Science: Computer Engineering, 01/2018

Louisiana State University - Baton Rouge
